Junmai Ginjo Yamahai Muroka Nama Genshu  
*Chiba, Japan*

## YUZUSHU

5°C

Heiwa Shuzo - 'Tsuru Ume' Yuzushu 12  
*This Yuzushu is made with a one-year-old Junmai Sake and yuzu juice.  
We normally serve this over ice.*

## UMESHU

5°C

Ota Shuzo - 'Dakon' Umeshu 12  
*This Umeshu is made by infusing a one-year-old junmai Sake with ao-ume  
(green ume fruit) and Korizato (rock sugar) for 6 months, then bottle aged until release.  
We normally serve this over ice.*

### **MULTIPLE PARALLEL FERMENTATION**

During this time the ingredients go through what is known as Multiple Parallel Fermentation where the conversion of the starch in the rice grain into sugar (by the koji mould) and the conversion of sugar into alcohol (by the yeast) are happening at the same time. The result is that undiluted sake has an alcohol content of approximately 18-20%, which is higher than any other naturally fermented beverage.

WHAT SETS SAKE FERMENTATION APART FROM WINE AND BEER FERMENTATION?

### **WINE FERMENTATION**

is known as Simple Fermentation as grapes already contain a high percentage of sugar naturally, so fermentation can occur spontaneously due to the yeast on the grape skins or with the addition of cultured yeast.

### **BEER FERMENTATION**

is known as Separate Fermentation as the brewer malts the grain to first develop the enzymes required to change the grains starches into sugars. Then the sugar is converted into alcohol by yeast. In beer these are two separate stages, unlike sake where they happen simultaneously (or parallel).
